**ABSTRACT:** A second member of the monotypic genus *Arculus* Monterosato 1909 (type species *Lepton sykesi* Chaster 1895) is described. The new species, *Arculus hyllebergi* n. sp. was collected at Panwa Cape, Phuket, Thailand, attached to the pereopods (walking legs) of the burrowing isopod *Dolicholana porcellana* (Barnard 1936). The justification for placement in *Arculus* is provided based on anatomy and shell morphology.

**Keywords.** Bivalvia, Galeommatoidea, *Arculus*, taxonomy, Cirolanidae, *Dolicholana*, commensalism, Thailand
